

Scientific Instruments

Peira Lab reactors

PROBLEM

Synthesis of molecules requires a specific environment and dedicated conditions in the reactor. Often the standard steel or glass reactor do not fulfill the needed requirements and specification for temperature and pressure.

SOLUTION

Peira offer a range of reactors in RVS and Hastelloy.

SPECIFICATIONS

Specification are on demand.

Peira currently has reactors in the field with:

- volumes from 50 to 1000ml
- pressure ranges up to 120 Bar
- up to 6 ports

Diameters are on demand, reactors can be made compatible to a range of different workstations.

Volumes, pressure ranges and the number of ports can be modified upon request from the customers.
